4 **UNITARY CONFIGURED BIRD REPELLENT APPARATUS**

5

6

7 **ABSTRACT OF THE DISCLOSURE**

8

9 A bird repellent apparatus having an integral base member and a plurality of prongs.
10 The base member, by means of a plurality of tabs having holes for receiving screws or
11 other fasteners, can be affixed to virtually any desired surface. The plurality of prongs
12 with sharp tips presents an impossible barrier to birds that would otherwise land or
13 perch on the surface to which the present invention is affixed. The combined base
14 member and prongs are formed from injection molded plastic structure that also provide
15 the tabs having holes to secure the base member to the underlying surface.
